

Welcome to Comos Industry Solutions

14
As a leading software solutions vendor worldwide for integrated Life Cycle Engineering, we can boast of a wide-ranging knowledge of the sectors involved, a variety of leading edge and highly capable technologies, and a customer-oriented way of operating.

With our Life Cycle Asset Information Management system Comos as the basis, Siemens Software Solutions GmbH enables industrial plant planners, constructors and owner/operators to standardize their engineering processes worldwide and to implement a platform for the strategic and universal management of planning data.

The setting up of an efficient technical plant management strategy means that workflows and processes can be substantially optimized and process throughput times can be significantly reduced. All this allows savings of up to 10% within the Total Life Cycle Costs.
